VACCINES

**COUNTRY
BROOK**

ANIMAL HOSPITAL

RECOMMENDED DOG VACCINES

There are certain vaccines that every dog needs. In addition, there are other vaccines that are given based on risk level and lifestyle. This applies especially to pets that are groomed, boarded or in daycare. Rabies, distemper, hepatitis, parvovirus and parainfluenza are part of the core immunization category, which means they're essential to your dog's health. Recommended vaccines for dogs include:

- **Rabies***
- **Distemper***
- **Hepatitis***
- **Parvovirus***
- **Bordetella** (*Prevents Kennel Cough or Upper Respiratory Infection*)
- **Leptospirosis** (*For dogs at higher risk due to wooded areas or water activities*)

RECOMMENDED CAT VACCINES

Cats may live most of their days indoors, but that does not mean they are safe from infection. Humans can unknowingly carry harmful viruses with them into their homes, which puts cats at risk. Recommended vaccines for cats include:

- **Rabies***
- **Panleukopenia*** (Feline Distemper)
- **Herpesvirus***
- **Calicivirus***
- **Feline Leukemia*** (Recommended for kittens and indoor/outdoor cats)

WHAT TO EXPECT?

Our animal hospital uses the safest and highest-quality vaccines to produce the highest level of positive results with a minimum of adverse reactions. Minor swelling and lethargy can be normal following vaccinations, but please contact our hospital if the side effects persist for more than one day.

**Office visit fee waived for pets receiving core vaccinations*
